

The LeakSmart Pro System 2.0

HOW IT WORKS

LeakSmart Wireless Leak & Temperature Sensor 2.0

When a leak is detected, the LeakSmart Sensor will send a signal to the Hub.

LeakSmart System Hub 2.0

When the LeakSmart Hub receives a signal of a leak, it will 1) close the valve if set to **Protect Mode** or 2) simply notify the user a leak was detected and from what sensor if set to **Detect Mode**.

LeakSmart Automatic Water Shut-Off Valve 2.0

When the system is in **Protect Mode** and a leak is detected, the LeakSmart Automatic Shut-Off Valve will turn off the water from the main water supply.

LeakSmart App 1.0.21

When a leak is detected and the valve is then closed, the App will alert the user at every step of the way!

... All in less than 5 seconds!
